

Post-Pandemic Careers

Professional Evolution Starts with Education

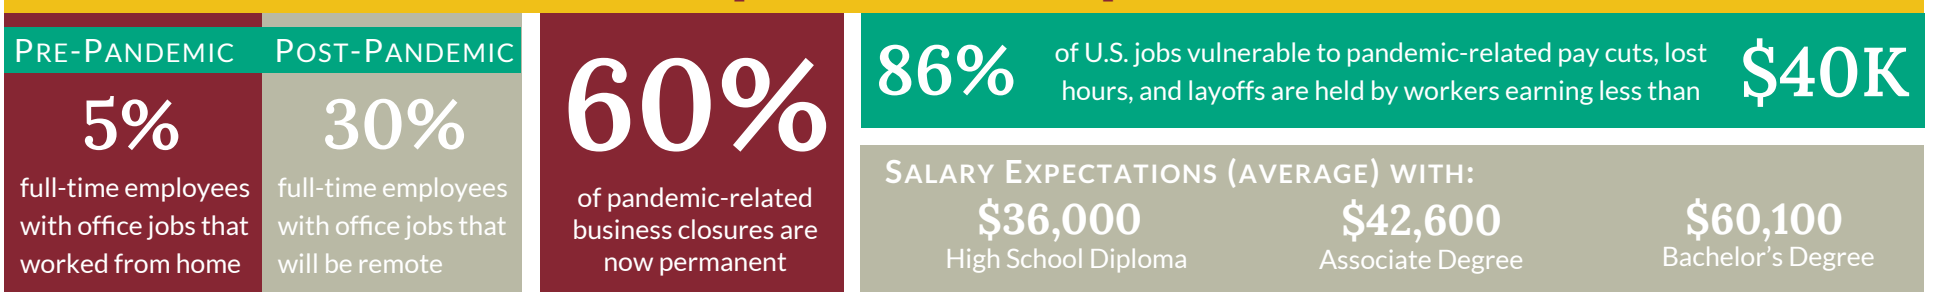

COVID-19 created more than just health problems as it swept across the U.S. in 2020. As history continues to play out, this year represents **the most uncertain times we have seen in generations** in terms of career sustainability and advancement. Even today, with unemployment on the rebound in some sectors, jobless numbers are still unprecedented as we struggle with health, wellness, job and financial security, and societal instability.

But with these struggles come opportunity. Academic institutions around the country – not just your local elementary school – are adapting programs and operations to make **education more accessible**. Government programs are **easing the financial burden** of college-level degrees and certificate programs. Workplaces are evolving to accept more technological solutions to **solve modern problems**. And these factors are converging to benefit motivated workers willing to gain impactful skillsets.

The reality is that COVID-19 will continue to impact our job culture for the foreseeable future. Now is the time to look beyond that horizon. Career-oriented professionals can today **expand knowledge, learn marketable skills, and gain power** in terms of salary, promotions, and even full career changes as our world evolves toward the new normal.

We will emerge from COVID-19 – but you can emerge stronger with NHTI.

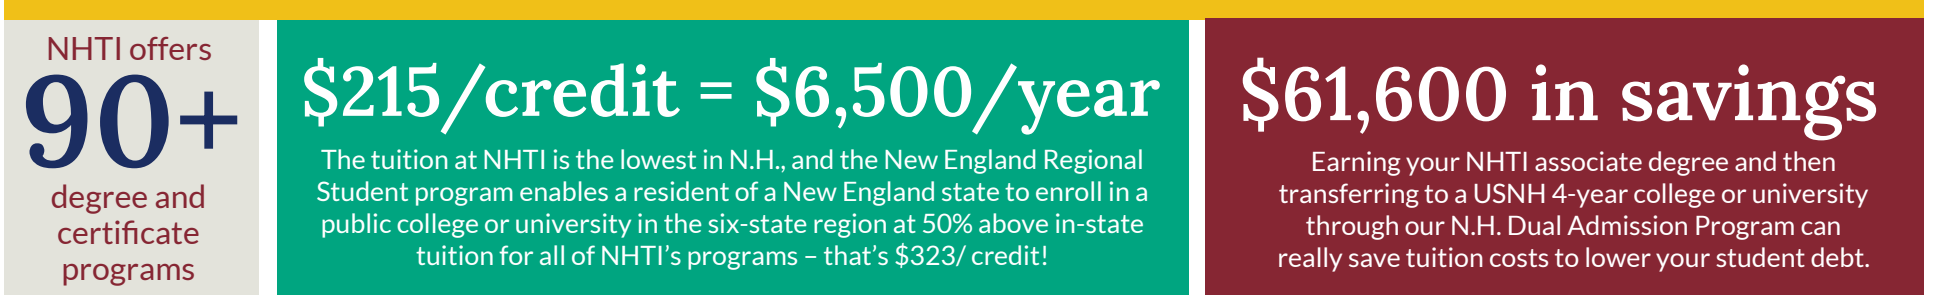

Adapt Your Goals and Expectations¹
